Title: Training Cancer Care Providers to Implement Sensitive Practice Guidelines When Treating Adult Survivors of Sexual Violence: A Blended Learning Approach

Researcher: Julie B. Schnur, Ph.D.

1425 Madison Avenue, Box 1077, New York, NY 10029
212-659-5644

The purpose of this research study is to evaluate the effectiveness of a training program, which consists of an E-Learning component and a live workshop component, to teach cancer care providers how to work sensitively with sexual violence survivors who are undergoing cancer care. Specifically, we want to see if the training program we have developed can improve providers' sensitive practice knowledge and skills, as well as their confidence using sensitive practice skills in real-world practice. Additionally, we want to see how satisfied trainees are with the program, and to learn how trainees apply the skills they've learned in the course to their clinical practice. You are being asked to take part in a research study because you are licensed, license-eligible, or certified in your healthcare profession, or can demonstrate current enrollment in an accredited healthcare provider training program; and, because you currently, or plan to (e.g., upon graduation), deliver clinical care to individuals with cancer.

Being in a research study is completely voluntary. You can choose not to be in this research study. You can also say yes now, and change your mind later.

If you agree to take part in this research, you will be asked to participate in an educational program consisting of three parts.

1. E-Learning modules – You will participate in online educational training, which will include watching videos (e.g., lectures, demonstrations), taking some brief quizzes and participating in clinically-relevant exercises.
2. A Live workshop – Upon completion of the E-learning modules you will be invited to participate in a live, two-day workshop that will be hosted at Mount Sinai in Manhattan. There will be two opportunities each year to attend. For non-local participants, we can reimburse some of your travel to and from New York City. We can also partially reimburse costs of lodging, meals, and local transportation.
3. Follow-up Survey – Three months after the workshop, you'll be asked to fill out an online survey to learn more about how you used what you learned in the course in your clinical practice.

Your participation in this study will take about 6 hours online for the E-Learning portion (note: you can take as long as you want to complete the E-learning modules, this is entirely at your own pace), two days (about 8 hours per day) for the live workshop, and about 15 minutes for the follow-up survey. We expect that 200 people will take part in this research study.

This project was determined to be exempt from federal human subjects research regulations.

Study ID #: IRB-18-01367

Form Version Date: November 28, 2018

You must be at least 18 years old to participate. If you are younger than 18 years old, please stop now.

The possible risks to you in taking part in this research are:

- Any emotional distress that might accompany learning about sexual violence and its effects on cancer patients and survivors, or being evaluated on skills associated with sensitive practice with sexual violence survivors (like feeling uncomfortable). There is also the risk of potential loss of confidentiality of data.

The possible benefits to you for taking part in this research are:

- The possibility of receiving continuing education credits
- Professional training in skills for working sensitively with cancer patients and survivors who also have a history of sexual violence.

To protect your identity as a research subject, the researcher(s) will not share your information with anyone. In any publication about this research, your name or other private information will not be used.

If you have any questions about this research, please contact the Researcher at 212-659-5644. You can also call the Program for the Protection of Human Subjects Office at 212-824-8200.
